Using Dimensional Guides

NOTE: Not Certified for Legal Trade

Summary:

These dimensional guides can be used to obtain dimensions on non-cuboidal objects placed on the measuring platform. The guides will extend the edges of non cuboidal objects so that the ExpressCube will read the correct dimensions.

How to Measure:

Place the guides that you will use on the empty platform and zero the platform weight.

Place the object to be measured on the platform.

The guides are correctly placed when the yellow ExpressCube logo is facing out.

1. Height
2. Right Length
3. Left Length
4. Width
5. Length Extensions (Two)

Slide the guides to contact the object so that the white pads are covering the black dimensional array lens as shown. If required, use the length extensions.

Remember to zero the empty platform when not using the dimensional guides.

Note: Use of the guides is intended for WMS, stocking & warehouse applications. It is not certified for legal trade.
